Cats vs. Dogs

The gray dog walked back to his house and told his parents the incident. "Mom, dad. My food got stolen..."

The gray dog said depressed... This book was created and published on StoryJumper, Inc. All rights reserved. Publish your own children's book: www.storyjumper.com.

2. It was a decent morning, and a gray dog was eating his everyday meal. "Man, this is good. stuff."

The gray dog said, enjoying his meal.

3. Dogs are dogged. When a dog loves you, he loves you through to the marrow of your bones and for ever. If they don't have dogs in heaven, then I want to go where they do. The one absolutely unselfish friend that man can have in this selfish world, the one that never deserts him, the one that never proves ungrateful or treacherous, is his dog. A man's dog stands by him in prosperity and poverty, in health and sickness. He will lick the hand that has no food to offer.

Dogs are dogged. When a dog loves you, he loves you through to the marrow of your bones and for ever. If they don't have dogs in heaven, then I want to go where they do. The one absolutely unselfish friend that man can have in this selfish world, the one that never deserts him, the one that never proves ungrateful or treacherous, is his dog. A man's dog stands by him in prosperity and poverty, in health and sickness. He will lick the hand that has no food to offer.

This particular book is about the differences between Cats and Dogs. I love how this book is set up. You get facts on a particular subject about cats and then the corresponding facts about dogs, and then a winner is declared. For example, a dogs relatives are wolves, coyotes and jackals, while a cats relatives are lions, tigers and leopards with the clear winner being cats. They also compare diets, senses and behavior among other things. A really cool way of presenting the information. Cats vs. Dogs classification is a fundamental Deep Learning project for beginners. If you want to start your Deep Learning Journey with Python Keras, you must work on this elementary project. In this Keras project, we will discover how to build and train a convolution neural network for classifying images of Cats and Dogs.
