MACHINE VISION

Chapter 1. Machine Vision

1.4.2 Coordinate Systems

1.7.2 Local Level

1.7.4 Object Level

1.7.3 Global Level

Chapter 2. Binary Image Processing

2.2 Geometric Properties

2.4 Run-Length Encoding

2.3 Projections

2.6 Morphological Operators

2.7 Optical Character Recognition

Chapter 3. Image Segmentation

3.4 Split and Merge

3.3 Region Representation

3.2 Region Segmentation

3.1 Regions and Edges

Chapter 4. Image Filtering

4.1 Image Filtering

4.5.6 Discrete Gaussian Filters

4.5.4 Cascading Gaussians

4.5.2 Fourier Transform Property

Chapter 5. Edge Detection

5.10 Line Detection

5.8 Edge Detector Performance

5.7 Subpixel Location Estimation

5.6 Gaussian Edge Detection

5.4 Laplacian of Gaussian

5.3 Second Derivative Operators

Chapter 6. Contours

6.2.3 Slope Density Function

6.2 Digital Curves

6.1 Geometry of Curves

Chapter 7. Texture Analysis

7.2 Statistical Methods of Texture Analysis

7.1 Introduction

Chapter 8. Computer Vision Systems

8.1 Lens Equation

Chapter 9. Photometric Stereo

9.5 Photometric Stereo

9.4 Shape from Shading

9.1 Image Irradiance

Chapter 10. Image Analysis

10.6 Discussion

10.3 Color Perception

10.1 Color Physics

Chapter 11. Active Vision

11.5 Active Vision

11.4.2 Imaging Radar

11.4.1 Structured Lighting

11.4 Range Imaging

11.2 Stereo Matching

11.1 Stereo Imaging

Chapter 12. Calibration

12.13 Robust Methods

12.10 Camera Calibration

12.9 Interior Orientation

12.4 Relative Orientation

12.3 Absolute Orientation

12.1 Coordinate Systems

Chapter 13. Curves and Surfaces

13.9 Surface Registration

13.8 Surface Segmentation

13.7 Surface Approximation

13.6 Surface Interpolation

13.5.3 Tensor-Product Surfaces

13.5.2 Surface Patches

13.5.1 Polygonal Meshes

13.4 Curve Representations

13.3 Geometry of Curves

13.2 Geometry of Surfaces

13.4.1 Cubic Spline Curves

13.3.2 Differential Geometry

13.3.1 Planes

Chapter 14. Dynamic Vision

14.7 Shape from Motion

14.6.4 Modified Greedy Exchange Algorithm

14.6.1 Deviation Function for Path Coherence

14.5.1 Ego-Motion Complex Log Mapping

14.4.6 Information in Image Flow

14.4.5 Robust Computation of Image Flow

14.4.4 Variational Methods for Image Flow

14.4.3 Gradient-Based Methods

14.4.2 Feature-Based Methods

14.2.2 Stationary Camera

14.2.1 Time-Varying Edge Detection

14.1.2 Static Segmentation and Matching

Chapter 15. Object Recognition

15.6.2 Morphological Approach

15.5 Recognition Strategies

15.4 Feature Detection

15.1 System Components

Chapter 16. Machine Vision Applications

16.1 Consumer Applications

16.2 Business Applications

16.3 Manufacturing Applications

16.4 Medical Applications

16.5 Defense Applications

Chapter 17. Machine Vision and Artificial Intelligence

17.1 Introduction

17.2 Knowledge Representation

17.3 Reasoning

17.4 Learning

17.5 Planning

Chapter 18. Machine Vision and Robotics

18.1 Introduction

18.2 Robotics

18.3 Vision and Control

18.4 Vision and Manipulation

18.5 Navigation

18.6 Guides and Conclusions

This book is designed for people who want to apply machine vision to applications at the time. As in most fast-developing fields, not all aspects of machine vision that are of interest to active researchers are useful to the fast pace. As in most fast-developing fields, not all aspects of machine vision that are of interest to active researchers are useful to the
